 **Bluetooth**
SMART

Key Less

No Combination

Share Access Remotely

Reinforced Security

Applications:

Remote sites that need occasional intervention, storage rooms, technical areas, locker rooms, multi-user equipment...

SECURITY IS OUR PRIORITY

For certain sectors such as utility, industry, transportation and distribution center, construction... it's essential to secure the access to the sites, areas, and other strategic locations.

But using traditional padlock has some limitations:

- >> Misplaced or forgotten keys
- >> Stolen keys
- >> Unauthorized keys duplication
- >> Combination difficult to remember
- >> Combination to change each time an employee is leaving the company
- >> No access visibility...

A MASTER LOCK SOLUTION!

To overcome these limitations, **MASTER LOCK** has developed **the Bluetooth® Smart Connected padlock** which unlocks with your smartphone. Make access more convenient for your employees and proactively manage users with the audit feature and activity report.

Result:

Quick and easy access to save you time and money.

SMART PADLOCK

USE YOUR SMARTPHONE AS A UNIQUE KEY

No more key and combination problems.

You will no longer need to replace keys or communicate secret combinations.

Padlocks are opened using the Bluetooth® Smart protocol in a smartphone or device.

Easy to use and to open, it can be used in the dark.

Ideal for: high employee turnover and places where combinations or keys losses are frequent.

SHARE ACCESS REMOTELY

With the Bluetooth Padlock your employees are immediately operational!

No need to manage physical keys: you share the access or delete other users without needing to meet via the free app **Master Lock Vault eLocks**.

Ideal for: remote sites.

MANAGE TEMPORARY ACCESS

Access can be granted for limited time frames.

Ideal for :

- Remote sites that need occasional intervention.
- Sites with team shifts.
- Quick intervention in case of emergency.

BLUETOOTH® SMART PADLOCK

MONITORING

Review in real time who has access to your business, when, how long and who attempted to open the padlock.

This logbook is easy to use and allows you to manage and to control your team's access.

Keep informed of the unauthorized access attempts.

TECHNOLOGY AT THE SERVICE OF SECURITY

Electromechanical solutions allow an additional security level required in most of the sectors.

That's why we recommend **the Bluetooth® Smart Connected padlock** in various applications and considerations.

This padlock has been designed to ensure the highest security.

Equipped with a thermoplastic elastomer cover, the outdoor Connected Padlock version is suitable with all weather conditions.

EASY USE IN 4 STEPS

- 1 - Activate the Vault App as well as the Bluetooth® Smart ready device (smartphone).
- 2 - Press any button on the lock to wake up the lock: the LED of the padlock becomes blue.
- 3 - The padlock sends a Bluetooth signal. Upon identifying an authorised device within range, the lock will light green and release the locking mechanism.
- 4 - The user now has to pull the shackle: it's open!

Provision's for locker applications where the phone is in proximity of the lock, but the user does not want the lock to unlock.

In that case, the padlock can be unlocked manually with a combination.
