

Quarter turn valve Lockout – 491B & S806

The universal lockout device #491B used in conjunction with the adjustable Lockout cable # S806 enable the safe & efficient lockout of virtually all quarter turn valves.

- ✓ The 491B has a unique clamping action. The simple thumb screw provides easy adjustment on a variety of valve handles.
- ✓ By threading the S806 cable through the eyelet on the 491B, this fixes the 491B in position and prevents any movement of the handle.
- ✓ Cable can still be adjusted to provide a tighter fit, even when locked with a safety padlock.
- ✓ Can be locked out with 4 padlocks or more with a safety hasp
- ✓ Includes high-visibility permanent « Danger » and « Property of » safety labels (French, English and Spanish)

Lockout also possible with #493B.
