AVIATION SAFETY LOCKOUT PROGRAM

FAA & OSHA Compliance Made Simple

RAISING THE SAFETY STANDARD

The Federal Aviation Administration (FAA) continues to focus attention on the safety of employees performing aircraft maintenance. The FAA Occupational Safety and Health Program, Order 3900.19B, Chapter 13 **Hazardous Energy Control Program** specifically references the use of OSHA's (Occupational Safety and Health Administration) **Lockout/Tagout** Standard 1910.147. This Order applies to **all FAA personnel**, contractors and subcontractors that perform duties ranging from design, to installation and maintenance of aircraft.

Your **employees must de-energize** the on-board systems to safely perform their maintenance and overhaul responsibilities.

- A pulled breaker can accidentally be bumped closed, re-establishing current
- A worker inside the aircraft cannot monitor the power receptacle to ensure no connection is made

Protect your workers from harm and the equipment from damage.

Master Lock Company now brings our decades of OSHA LO/TO expertise – the broadest line of safety padlocks and innovative lockout devices, to the aviation industry with **effective aircraft safety lockout devices** – devices that are:

- Easy-to-use
- Maintain the de-energized state
- Notify others of the safety lockout and maintenance being performed that are essential for worker safety

“These products provide an excellent value and are the best products on the market for this type of application.”

- FAA Safety Team Representative and Director of Maintenance for a private flight corporation

**Aircraft have energy systems –
Lock them out for Safety!**

AVIATION SAFETY LOCKOUT PROGRAM

*Lock available separately

Aircraft Circuit Breaker Lockout No. 22A868

- Locks circuit breakers in the “off” position to prevent accidentally re-energizing the system
- Universally fits multiple circuit breaker styles
 - Breakers with and without collars
 - Long and short breakers
- “Locked Out” identification labels included

Aircraft Safety Lockout Kits

- Assortment of safety lockout padlocks and devices for aircraft maintenance
- Large kit includes 12 safety padlocks and aircraft circuit breaker lockout devices
- Compact kit includes 6 safety padlocks and aircraft circuit breaker lockout devices
 - Each kit includes the matching number of tags and one power receptacle lockout device
 - Padlocks are keyed different to comply with OSHA’s 1 Key – 1 Lock – 1 Employee guideline
 - Choose Thermoplastic padlock model – dielectric shackle 1TDC9 or durable steel shackle 4FG03

*Lock and tag available separately

Aircraft Power Receptacle Lockout No. 39L523

- Prevents insertion of electrical power plug maintaining the de-energized state
- Universally fits 3-prong and 6-prong aircraft power receptacles
- Easily hand tightens on receptacle prongs

Aircraft Lockout Tag No. 22A869

- Displays clear *Danger – Do Not Operate* message
- Patented Guardian Extreme™ process produces ultra-durable polypropylene tags
- Write worker name and completion date in permanent marker. Wipe clean with isopropyl alcohol and re-use tag for the next job.

Additional safety lockout devices for use throughout your facilities:

Oversized Plug and Control Cover
No. 1TDB5

Push Button Covers
Nos. 22A865, 22A866

110 – 550v Plug Lockouts
Nos. 3VAE3, 3VAE4

No. 39L524 shown
No. 39L525 available

No. 39L527 shown
No. 39L526 available
